

Colbert Infrared Services: Leading the Way.

Colbert Infrared Services, Inc. is the proven leader when it comes to delivering the most advanced infrared inspection services available on the market today. We have over 20 years of experience in various applications. All of our Thermographers are Certified to ASNT standards.

Infrared Predictive Maintenance Inspections

Infrared electrical/mechanical inspections are an extremely cost effective part of any PdM program. No downtime is required to perform an infrared survey. Infrared inspections allow you to prioritize equipment repairs before the equipment fails. Our inspections are performed by certified thermographers using the latest radiometric infrared cameras on the market. In the field we use Pocket PC's and tablet sized "Pen" based Pentium computers with barcode readers for data gathering. Most importantly, data is entered directly into the Thermal Trend[™] infrared PdM inspection management system during the inspection. Your reports will track new and re-occurring problems and show the trends over time toward equipment failure. Also provided are prioritized lists of problems and a complete inventory indicating which equipment was or was not tested. Reports are delivered both as hard-copy color glossy reports and on CD-ROM. The CD-ROM version allows you to view and print the reports from your own computer. At your request reports can be downloaded directly from our secure internet site.

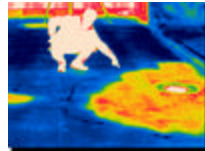

Thermal Trend[™] Infrared PdM Inspection Management System

The Thermal Trend[™] database system integrates all management information and all infrared thermographic data into one program. The system allows for retrieval of historical data and input of current data on-site so that the current condition of equipment is easily monitored. Thermal Trend[™] has been field tested for over 10 years and is continually being upgraded to respond to evolving industry needs. It helps you easily manage the administrative demands of the most complex infrared PdM programs.

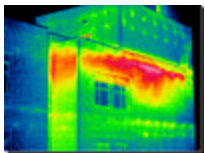

Roof Moisture Surveys

By using both infrared and capacitance equipment to pinpoint and define problem areas, we provide total coverage of your flat built-up roof system. Identifying and outlining areas of wet insulation on your roof enables you to accurately budget and plan for repairs or replacement, based on known information not guesses. No other testing method can give you a clearer picture of the condition of your roof system for just a few cents per square foot.

Building Envelope Studies

We offer comprehensive building envelope studies for heat loss, cold air infiltration, and moisture migration. Colbert Infrared Services, Inc. has the technical expertise and the right equipment to evaluate any condition within your facility discernable by temperature.

Research and Development Projects

Our experienced technical staff can help you with your advanced R&D studies. We have worked on such varied applications as the ergonomics of computer mouse use, skin temperature measurement of marine mammals, target signature analysis, micro-thermal imaging. So if it's printed circuit boards, target signature analysis, composites, micor thermal imaging, ect. we have the equipment and personal to get the job done right the first time.

Training Courses and Mentoring Programs

We offer training courses for applications and equipment. Our course content covers a wide variety of topics and can be customized to fit your needs. We offer preparation for the Level I and Level II ASNT exam. Our mentoring programs provide you with one-on-one instruction with professional infrared thermographers. We can review your in-house programs periodically, and update your staff in the latest in thermographic techniques and methods.
